

INVOKANA (Canagliflozin): Used along with Diet and Exercise, and Sometimes With Other Medications, To Lower Blood Sugar Levels in Patients with Type 2 Diabetes

INVOKANA (Canagliflozin): Used along with Diet and Exercise, and Sometimes With Other Medications, To Lower Blood Sugar Levels in Patients with Type 2 Diabetes

Although, your health condition may impact your everyday life, do not let it define who you are. INVOKANA (canagliflozin) is used along with diet and exercise, and sometimes with other medications, to lower blood sugar levels in patients with type 2 diabetes (condition in which blood sugar is too high because the body does not produce or use insulin normally). Canagliflozin is in a class of medications called sodium-glucose co-transporter 2 (SGLT2) inhibitors. It lowers blood sugar by causing the kidneys to get rid of more glucose in the urine. INVOKANA (canagliflozin) is not used to treat type 1 diabetes (condition in which the body does not produce insulin and, therefore, cannot control the amount of sugar in the blood) or diabetic ketoacidosis (a serious condition that may develop if high blood sugar is not treated). Over time, people who have diabetes and high blood sugar can develop serious or life-threatening complications, including heart disease, stroke, kidney problems, nerve damage, and eye problems. Taking medication(s), making lifestyle changes (e.g., diet, exercise, quitting smoking), and regularly checking your blood sugar may help to manage your diabetes and improve your health. This therapy may also decrease your chances of having a heart attack, stroke, or other diabetes-related complications such as kidney failure, nerve damage (numb, cold legs or feet; decreased sexual ability in men and women), eye problems, including changes or loss of vision, or gum disease. Your doctor and other healthcare providers will talk to you about the best way to manage your diabetes. Although INVOKANA is not a weight-loss or blood pressure medicine, adults with type 2 diabetes can lose some weight and may see their systolic blood pressure lowered with INVOKANA. This medicine is available only with your doctors prescription. Thanks and may you

have a good understanding about this drug INVOKANA (canagliflozin). You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
