

Office Ergonomics: Preventing Repetitive Motion Injuries & Carpal Tunnel Syndrome

Before you consider ordering this book, notice how you are sitting right now (assuming you are at a computer): Is your torso directly over your hips or is rounded forward or perhaps you are leaning to one side or another. Maybe your hips have slid forward and you are sinking in your chair. Is your neck craning towards the screen or is directly over your torso? Is your screen at eye level and straight ahead or do you have to look up, down, right or left? How about your forearms are they at 90° to your elbow? Is there an arm rest that gets in the way of doing this? Same for your legs - are your shins 90° to your knees? These are very common ergonomic mistakes that many people make. The problem is that overtime they lead to serious injuries like carpal tunnel syndrome, shoulder and neck issues, elbow pain, inflamed tendons, back pain, etc. This is especially problematic if you spend a few hours or more each work day at a computer - your risk of injury is dramatically increased compared to someone who only spends one hour a day. The good news is that there is a lot you can do to prevent, eliminate and reduce the possibility of injuries such as carpal tunnel syndrome, tendonitis, muscle-skeletal issues, etc. Below are few things you can do right now to reduce risk of injury and ease existing problems. There are many more great ideas and information in the book. Take breaks: You were born to move! Your body needs movement to stay healthy. Be sure to take a 5 minute break every hour get up and walk around, stretch or do some chair exercises. Use a head set or speaker for phone time. If you are going to use the phone while keying and don't use a head set or speakerphone you'll end up raising a shoulder too high resulting in poor posture and strain. Get a good head set or speaker; keying and talking at the same time will be much easier and healthier too! Adjust your workstation to

fit you. Your head should be looking directly at your screen which should be at the same height as your head. You want your key board directly in front of you. If you are using a copy stand make sure that it is right along side of your screen so you can see it with your eyes without having to turn your head. Adjust chair properly. Make sure your feet are on the floor and that your shins are at a right angle to your thighs. Your thighs should be parallel to the floor. The seat should be in a neutral position. Those with larger shoulders or upper bodies can tilt the seat back just a little. For most people it is best to sit upright with your torso right over your hips. You also want to select a chair that has a good lumbar support for your lower back and posture. Select a chair with removable arm rests or without arm rests because they interfere with correct posture as people end up leaning on the arm rests. Office Ergonomics is the only book available to offer comprehensive solutions for avoiding and reducing costly, painful, and debilitating injuries. Features: 100s of tips for making your workstation comfortable, efficient and for reducing the risk of injury.

Causes and treatment of repetitive motion injuries. Positions and setups you must avoid. Fixes that don't work. Behavioral prevention tips. How ergonomics helps. Bonus! Exercises to relieve stress at computer & workstation. This is book is essential for maintaining work related health and preventing repetitive motion injuries such as carpal tunnel syndrome, tendonitis, shoulder issues, etc. If you are experiencing shoulder or neck issues, consider our companion book: Release Your Shoulders, Relax Your Neck also available here on Amazon.
