

RANITIDINE (By Mouth): Treats Stomach or Duodenal Ulcers, Gastroesophageal Reflux Disease (GERD), and Zollinger-Ellison Syndrome; and also Prevents Heartburn

RANITIDINE (By Mouth): Treats Stomach or Duodenal Ulcers, Gastroesophageal Reflux Disease (GERD), and Zollinger-Ellison Syndrome; and also Prevents Heartburn

Although, your health condition may impact your everyday life, do not let it define who you are. RANITIDINE is used to treat ulcers; gastroesophageal reflux disease (GERD), a condition in which backward flow of acid from the stomach causes heartburn and injury of the food pipe (esophagus); and conditions where the stomach produces too much acid, such as Zollinger-Ellison syndrome. Over-the-counter ranitidine is used to prevent and treat symptoms of heartburn associated with acid indigestion and sour stomach. Ranitidine is in a class of medications called H2 blockers. It decreases the amount of acid made in the stomach. Other Uses For This Medicine: Ranitidine is also used sometimes to treat upper gastrointestinal bleeding and to prevent stress ulcers, stomach damage from use of nonsteroidal anti-inflammatory drugs (NSAIDs), and aspiration of stomach acid during anesthesia. Talk to your doctor about the risks of using this medication for your condition. Thanks and may you have a good understanding about this drug RANITIDINE. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
